

verity

From the fabric roll to the ready garment. One calm system.

A Verity workspace built around how Stylified works: rolls in, lots cut, bundles scanned from hand to hand, every count agreed by both sides, karigars paid by the piece, and the cost of every lot known.

PREPARED FOR

Stylified
Garment manufacturer, Ludhiana

PROPOSAL

25 October 2026

DOCUMENT

1 of 6

Know where every roll, bundle and rupee is.

Verity gives Stylified a living picture of the factory: how much fabric is on the shelf, which lot it went into, which bundle is with which karigar, what came back good, what is short and who answers for it, what is late, what is owed, and what each lot really cost. All of it is worked out from the entries your team makes, never typed in twice.

OXFORD FORMAL

WINTER FLANNEL

SUMMER POPLIN

EXPORT CHECK

ONE WORKSPACE

6 roles

Owner, manager, supervisor, munshi, store and cutting master, each with their own screens.

SCAN, DO NOT TYPE

QR on every roll and bundle

A phone camera opens the roll or bundle and shows the one thing to do next.

READY QUICKLY

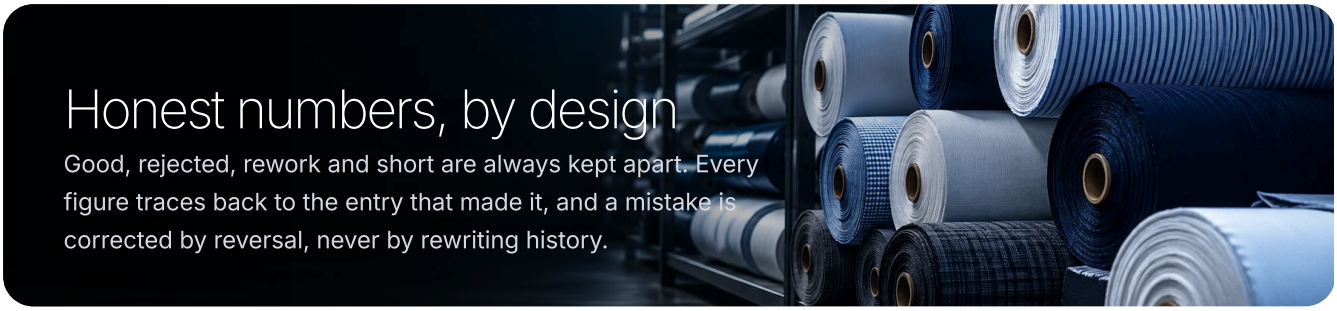

~4 weeks

From kickoff to your own live workspace, with a test lot on your floor in week two.

01 What changes for each person

WHO	BEFORE	WITH VERITY
Owner	Asking around to learn where a lot is, what it cost and who is waiting to be paid	One factory screen: where every piece is, what is late, what is owed, the cost per good piece of every lot, and a change history of who did what
Manager	Deductions and write-offs argued from memory	An approvals inbox with the facts and a photograph, decided from a phone, within limits the owner sets

WHO	BEFORE	WITH VERITY
Supervisor	Registers, counts that do not add up, no proof of a defect	Scan a bundle, pick the karigar, count with plus and minus. The receiver's count is the one that counts, and a shortage opens a case on whoever held the pieces
Munshi	Typing the same figures into more than one place	Enter once, in Hindi or English, and print a bilingual slip with a QR for every bundle
Store and cutting master	Rolls measured and remembered, fabric used worked out afterwards	Receive rolls with a printed label each, cut a lot from chosen rolls in one step, and see what is left on every roll

Honest numbers, by design

Good, rejected, rework and short are always kept apart. Every figure traces back to the entry that made it, and a mistake is corrected by reversal, never by rewriting history.

02 What is in your workspace

Fabric rolls

Receive rolls by invoice, each with its own number and a printed QR label. Stock by fabric, a balance on every roll, a warning when a fabric runs low, a warning when the same supplier invoice is entered twice, and opening stock on launch day.

Lots, rate card and cutting

Plan a lot, set the rate per piece for each stage on the lot's own rate card (a stage can be skipped for a lot), and cut it from the chosen rolls in one step. Numbered bundles, B-0001 onward with no gaps, each with a slip: full size or a small sticker for the tie, printed together.

Give out and take back, by scan

Scan a bundle, pick the karigar, confirm the count, and a challan prints for the worker. Taking back is counted as good, rejected, rework and short. The receiver's count is the truth, and the supervisor who recorded each handover answers for it.

Cases and charges

Pieces that go short open a case on the worker who held them and raise a charge request for the lost pieces. Nothing is deducted silently: the manager or the owner decides within their limits, and the decision, who made it and why stay on the case.

Wages, advances and balances

The lot's rate times the accepted pieces. Advances, recoveries, deductions with a reason, payments with mode and reference, and an opening balance for what was owed before Verity. Every karigar has a clear account.

Lot costing

Fabric at the roll's invoice rate, wages, and the cost categories you choose (thread, printing, packing and more), less charges recovered. Cost per good piece for every lot, and a shared bill split by pieces cut.

Team

Add a person in one sheet with their role and stages. Each karigar has a profile and a supervisor, so a supervisor's list shows their own people. Switch someone off when they leave; their history stays. People without an email sign in with a username.

Ready stock

The garments that finished the last stage, less what has gone out. Enter the stock already on the shelf as opening stock, take stock out as sold, dispatched or a sample, and correct a count with a reason. Every movement is on a ledger you can reverse and download.

Away, counted and printed

Mark a supervisor away and let another cover their stages and karigars for the dates. Count the fabric shelf by scanning roll numbers and post only the differences. The slip sheet remembers which bundles have a slip printed.

Routes that fit the factory

Mark a stage required or optional. A lot can skip only an optional stage, so a shirt without a collar and cuff follows its own route while every other lot keeps the full one. Each person opens on the page their work is on.

Reports and records

Reports led by graphics with the table folded below, each with Excel, CSV and Print or PDF. A change history of who did what and when. Defect photographs taken on the phone and attached to the entry.

Hindi and English: the floor screens, the daily entry and every slip are bilingual, chosen on each phone. The owner and office screens are in English today; a Hindi office interface is one of the next steps in section 05.

03 Your investment

The software and everything in document 2 are the same on both options. What differs is how you pay for it: more once and less each month, or less once and a little more each month.

OPTION A · OWN IT

₹90,000 + GST, once

₹8,500 + GST a month

The lowest running cost. Cheaper than Option B in total from the 19th month.

OPTION B · START LIGHT

₹25,000 + GST, once

₹12,000 + GST a month

The smallest amount to begin with. The monthly amount is a little higher.

TOTAL OVER TIME, BEFORE GST	OPTION A	OPTION B
At go-live, the one-time amount	₹90,000	₹25,000
After 3 months	₹1,15,500	₹61,000
After 12 months	₹1,92,000	₹1,69,000
After 24 months	₹2,94,000	₹3,13,000
After 36 months	**₹3,96,000**	**₹4,57,000**

WHAT THE MONTHLY AMOUNT COVERS	IN PRACTICE
Server	Hosting in an Indian data-centre region, database, photograph storage, security patching and monitoring. You pay no separate hosting bills
Maintenance and support	Fixes, small configuration changes, user and role changes, support on working days, daily backups and a rehearsed restore
Subscription	The right to use Verity, and every improvement we release to it

All amounts are plus GST at the prevailing rate. The one-time amount is invoiced half at kickoff and half at go-live; the monthly amount begins at go-live. The invoice amounts for each option are in document 3.

Where it runs, and where it can go

Your workspace is hosted by PlotArmour in an Indian region, with your data isolated from every other customer. When you want it, we can quote a move to **your own Vercel and Supabase accounts, in your name**, with your hosting bills kept inside the same monthly amount. We will offer it once it has been through a full rehearsal, and until then you can export all your data whenever you ask.

04 The road to go-live

WHEN	WHAT HAPPENS
Day 0	Kickoff call: confirm the build decisions (document 2), the list of people and the stages, and the sign-in for people without an email

WHEN	WHAT HAPPENS
Week 1	Your own workspace is set up: roles, people, karigars (pasted from your list), stages and rates, opening fabric stock and opening balances, challan heading. Supervisors are shown the phone screens
Week 2	**A test lot runs on your floor**: cut, scan, give out, take back, challan, case, wages. Paper runs beside it
Week 3	Your feedback, fixes, a restore rehearsed in front of you, training in Hindi and English for each role
Week 4	Go-live: lots move onto Verity stage by stage, with paper kept as a control until the numbers agree

05 What comes next

When Stylified is ready, the same workspace grows with it, each step quoted on its own and agreed in writing first:

Join or link lots	With cost re-allocated by pieces or an approved percentage, and the source lots kept intact
Hindi on the office screens	A language switch for the owner, manager and munshi screens, reports and errors
Packing and dispatch	Packing, packets, parties and transport references (outside release one by your own requirement sheet)
Alerts to the phone	A daily summary and challans sent by WhatsApp or SMS, once a provider is chosen
Label printer	Printing the roll labels and bundle slips in a label printer's own language (Zebra or TSC) instead of A4, once the model is chosen
Accounts and parties	A Tally voucher export, a supplier and party master, a GST job-work challan for outside units
More	Style and size master with buyer orders, offline scanning for weak signal, a second unit

06 Getting started

- Tell us "go" and name the person who decides for Stylified, and the person who answers for the floor.
- Share your list of people and which supervisor looks after which stages, and your karigar names (a pasted Excel list is enough; rates can follow).
- Give each supervisor a phone with a camera and internet; the workspace runs online.
- Tell us your printer and the sticker size you would use for the bundle tie.

Next step: reply to team@plotarmour.in with "Go ahead" and the option you prefer, and we will send the kickoff date. We would be glad to walk you through the workspace on a call first.

Service starts at go-live with an initial term of three months, then continues month to month; the full terms are in document 3. This proposal is valid for 30 days from 25 October 2026.
